

Backcountry Blend Bloom Base Nutrient For Outdoor Use

Backcountry Blend Bloom is a controlled release granular base nutrient. It can easily be applied to soil to provide your plants with the most ideal array of nutrients for the flowering stage. Backcountry Blend Bloom is part of the Backcountry Blend Outdoor Feed Program.

Base Nutrient

Dry Fertilizer

Flowering Stage

HOW IT WORKS

Backcountry Blend Bloom contains a full spectrum of nitrogen (N), phosphorus (P), potassium (K), and calcium (Ca) that are measured specifically for the flowering stage. The Bloom formula includes higher levels of phosphorus (P) and potassium (K) that plants require during the flowering stage. Phosphorus plays a key role in essential functions of the plant such as photosynthesis, transfer of energy, and nutrient movement through the plant. Potassium aids in the conversion of phosphorus into energy your plants can use and strengthens cell walls to support larger yields. It can either be applied by top-dress application or be mixed throughout the soil. The low application rate makes feeding simple by only requiring application every 3-5 weeks so you can focus on tending to your plants to get the best results possible.

HOW TO USE IT

Apply Backcountry Blend Bloom at a rate of 0.5 - 1 tsp per 1 foot of plant height every 4 weeks during the flowering period. Stop feed 4 weeks before harvest.

For optimal results follow the Backcountry Blend Outdoor Feeding Program during the plant's entire life cycle.

Product Benefits:

Save Time

BackCountry Blend (BCB) Bloom saves growers time by being the simplest and most aggressive slow-release formula on the market. Here are some of the time-saving qualities of the BCB feeding program:

- Monthly Feeding (every 3-4 weeks)
- No Mixing
- No Buffering
- Easy Application

Save Money

BackCountry Blend is the only feed program that promises economic nutrition without compromising results.

Save Labour

With a slow-release fertilizer like BackCountry Blend, you can expect a massive decrease in labor with capabilities like:

- Water Only Irrigation
- Minimal Application
- Easy to Train Staff
- No Water Reservoirs Needed (Perfect for Irrigation Systems)
