

For Use In

Dense Bud Compactor Dry Fertilizer Additive

Dense Bud Compactor is a flowering additive with a specially formulated blend of potassium, which can be used separately from your regular feeding program. It is designed to maximize mass and bulk flowers during the bloom stage.

Additive Nutrient

Dry Fertilizer

Flowering Stage

HOW DOES IT WORK?

Dense Bud Compactor is a one of a kind flowering additive that gives your plants a large dose of potassium (K) during heavy fruiting and flowering. Plants lacking in potassium during the later stages of bloom will produce airy and loose flowers. By introducing a 0-0-62 straight potassium formula, Dense ensures you get maximum weight out of your flowers when it comes time to harvest. The results come from the key role potassium plays in the development of flowering plants. Potassium is responsible for sugar production and the plant's ability to store the energy needed for flower development. It also increases the strength of the plant at a cellular level and helps produce sturdy stems to support larger flower sites. These benefits make Dense a must use for growers looking to get the most out of their flowers in time for harvest.

HOW TO USE IT?

Soil Application: Use 1-2 g/1 L (4-8 g/1 Gal) of water once a week. Use in the last 3 weeks of flowering, allowing at least one week of flush. Use with water only.

Hydroponic Application: Flush nutrient reservoir of existing solution. Add 1-2 g/1L (4-8 g/1 Gal) of water. Circulate for 48 hours. Flush then replace with fresh nutrient solution. Repeat the following week allowing at least one week of flush.

For optimal results follow the Dense Application Rates during the plant's entire life cycle.

***DISCLAIMER:** Dense is sold as *Horti rawK* in the USA

Product Benefits:

CFIA Exempt

A fertilizer is exempt from registration if it does not contain a living substance or organism, a pesticide, or a supplement or micronutrient that is not registered with the CFIA.

Concentrated Source of Potassium

Dense is a highly concentrated source of potassium that delivers a 0-0-62 formula in the last weeks of flower. High amounts of K ensure you maximize mass and bulk in flowers in time for harvest.

Standalone Supplement

Dense is used as a standalone product with water only on a grower's feed or water day instead of their regular feeding solution. Used in the last 3 weeks of flower, growers will notice results after one application of Dense.
