

Horti RawK Dry Fertilizer Additive

Horti RawK is a flowering additive with a specially formulated blend of potassium, which can be used separately from your regular feeding program. It is designed to maximize mass and bulk flowers during the bloom stage.

HOW DOES IT WORK?

Horti RawK is a one of a kind flowering additive that gives your plants a large dose of potassium (K) during heavy fruiting and flowering. Plants lacking in potassium during the later stages of bloom will produce airy and loose flowers. By introducing a 0-0-62 straight potassium formula, Horti RawK ensures you get maximum weight out of your flowers when it comes time to harvest. The results come from the key role potassium plays in the development of flowering plants. Potassium is responsible for sugar production and the plant's ability to store the energy needed for flower development. It also increases the strength of the plant at a cellular level and helps produce sturdy stems to support larger flower sites. These benefits make Horti RawK a must use for growers looking to get the most out of their flowers in time for harvest.

HOW TO USE IT?

Soil Application: Use 1-2 g/1 L (4-8 g/1 Gal) of water once a week. Use in the last 3 weeks of flowering, allowing at least one week of flush. Use with water only.

Hydroponic Application: Flush nutrient reservoir of existing solution. Add 1-2 g/1L (4-8 g/1 Gal) of water. Circulate for 48 hours. Flush then replace with fresh nutrient solution. Repeat the following week allowing at least one week of flush.

For optimal results follow the Horti RawK Application Rates during the plant's entire life cycle.

***DISCLAIMER:** Horti RawK is sold as Dense in the Canada

About Horti RawK

Product Benefits:

CFIA Exempt

A fertilizer is exempt from registration if it does not contain a living substance or organism, a pesticide, or a supplement or micronutrient that is not registered with the CFIA.

Concentrated Source of Potassium

Horti RawK is a highly concentrated source of potassium that delivers a 0-0-62 formula in the last weeks of flower. High amounts of K ensure you maximize mass and bulk in flowers in time for harvest.

Standalone Supplement

Horti RawK is used as a standalone product with water only on a grower's feed or water day instead of their regular feeding solution. Used in the last 3 weeks of flower, growers will notice results after one application of Horti RawK.
