GreenPlanet

Product Benefits:

CFIA Registered

Massive Bloom is registered with the Canadian Food Inspection Agency under the number 2021903A. The CFIA ensures that fertilizers are safe and verified against prescribed standards before they are released for sale in the Canadian marketplace.

Full-Array of Flowering Elements

Massive is blended with an array of elements like L-form amino acids, natural sugars, and a balance of micro and macronutrients specifically selected to assist budding plants with the production of large, healthy flowers.

Comprehensive Results

With the scheduled use of Massive in the garden, growers can expect an increase in flower size, aromatics, essential oils, chlorophyll content, photosynthesis, CO2 utilization, proper NPK ratios, cell expansion and content, cell wall thickness, floral components, and resistance to stressors.

Massive Bloom Additive Liquid Fertilizer

Massive Bloom Formulation is our premier flowering additive formulated with all of the necessary macro and micro elements required to achieve an increase in flower size, as well as providing several additional beneficial properties. Massive Bloom is registered with the Canadian Food Inspection Agency under the number 2021903A

HOW DOES IT WORK?

Massive is a comprehensive bloom additive that contains a full array of the elements plants require to produce large, healthy flowers. Massive Bloom is formulated with L-form amino acids, a specially formulated vitamin profile, a unique blend of carbohydrates, a chelated mineral profile, and a combination of essential nutrients. These include phosphorus and potassium, which guarantee hefty buds in time for harvest. This formula also increases and promotes flower size, aromatics, essential oils, chlorophyll content, photosynthesis, CO₂ utilization, proper NPK ratios, cell expansion and content, cell wall thickness, floral components, and resistance to stressors. Furthermore, the components in Massive work aggressively to promote, as well as transport vital fluids and cell building materials to the flower sites. This creates truly impressive stacked flower clusters full of aromatic essential oils.

HOW TO USE IT?

Add Massive at a rate of 5 ml/L (19 ml/Gal) to your nutrient reservoir for the duration of the flowering cycle. Adjust the pH as needed. At 5 ml/L (19 ml/ Gal) your nutrient solution will elevate ppm levels by an additional 300-400 PPM. Be sure to lower your nutrient levels to compensate as to not experience overfeeding. Our Feed Programs take into account the extra PPM so there is no need to cut back on your nutrient strength when following the feed chart.

For optimal results follow the Massive Bloom Application Rates during the plant's entire life cycle.
