

Vitathrive Additive Liquid Fertilizer

Vitathrive Propagation Fertilizer is our comprehensive additive blend of vitamins and minerals formulated for the vegetative stage of plant growth. It is designed to reinforce plant health and support essential functions. Vitathrive is registered with the Canadian Food Inspection Agency under the number 2021904A.

Additive Nutrient

Liquid Fertilizer

Vegetative Stage

Flowering Stage

For Use In

HYDRO PONICS

DRIP TO IRRIGATE

HYDROPHONIC AIR MIX

SOIL / SOILLESS

Product Benefits:

CFIA Registered

Vitathrive is registered with the Canadian Food Inspection Agency under the number 2021904A. The CFIA ensures that fertilizers are safe and verified against prescribed standards before they are released for sale in the Canadian marketplace.

Source of Stress Release

One of the main components of Vitathrive, vitamin B1, helps reduce the stresses that come from rapid cell growth, environmental conditions, and heavy fruit loads.

Aid in Propagation

Along with the added B-vitamins, Vitathrive contains a source of potassium that aids in expanding and strengthening the root zone during propagation.

HOW DOES IT WORK?

Vitathrive Propagation Fertilizer is our propagation supplement that contains a full complement of b-vitamins and elements that aid the plant through the vegetative stage. The benefits from Vitathrive come from the carefully selected combination of elements that each serve a unique function for plant health and development. One of the main components of Vitathrive, vitamin B1, helps reduce the stresses that come from rapid cell growth, environmental conditions, and heavy fruit loads. The added vitamin B2 will boost the plant's natural defences against pathogens and insects. This is essential for plants still in the early weeks of the grow stage, as they are more susceptible to these issues. Vitamin B6 and vitamin B12 support numerous metabolic enzymes that help the plant break down molecules for easier absorption. We also include added potassium (K), which boosts the plant's immunity response and helps strengthen cell walls to support larger yields. Vitathrive ensures your plants get all the support they need to for rapid growth.

HOW TO USE IT?

Apply at a rate of 1-2 ml/L (4-8 ml/Gal) throughout the entire vegetative cycle. Refer to our feed programs for more specific measurements to achieve the best results.

For optimal results follow the Vitathrive Application Rates during the plant's entire life cycle.
